Euroopa Komisjoni ettepanek keelustada jahipidamine
ja kalastamine 10% Euroopa Liidu maa-alal

Austatud härra Lillemäe

Keskkonnaministeerium on Euroopa Komisjoni juhendmaterjali *Draft Technical Note on Criteria and Guidance for Protected Areas Target* kohta saatnud Euroopa Komisjonile ettepanekuid kaks korda. Esimene kord 15. detsembril 2020 eelnõu esimesele versioonile ja teine kord 31. märtsil 2021 eelnõu teisele versioonile.

Juhendmaterjali esimesele versioonile saadetud ettepaneku jahindust- ja kalandust puudutava osa saatsime teile 28.12.2020 kirjaga nr 5403-2.

Juhendmaterjali teisele versioonile, mida tutvustati vastaval *Ad hoc* kohtumisel 18.02.2021, saatsime kalapüügi ja jahipidamise keelustamise kohta range kaitsega aladel järgmise ettepaneku:

We suggest that the approach could be inclusive to activities which are traditional and assessed to be no-/low-impact such as fishing and hunting. Member states should have the flexibility to enable activities based on specific site characteristics and conditions. Protected sites can vary significantly already within a country (ecologically) and there are numerous external conditions that influence the protection (previous land use, population density etc). Therefore such a priori exclusion of fishing and non-commercial and limited hunting should not be done uniformly on the EU level. Even more so, when these activities support and promote the existence of the natural features of protected areas considering that the main aim is the conservation of biodiversity. The exclusion is not justified considering that at the same time limited tourism, natural disaster prevention and non-intrusive installations are given a special status. Also, allowing, restricting or prohibiting these activities should be the competence of the Member States considering the site-specificity and the impacts to the conservation objectives.

Lugupidamisega
